DETAILED ACTION

1. This Office Action is in response to Applicant's application serial no. 10/711,856 filed on October 10, 2004. Claims 1 and 2 are pending for examination.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 10/10/2004 has been considered by the Examiner.

Specification

3. In the Specification, The CLAIM or CLAIMS is preceded by BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).

The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT.
- (e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC.
- (f) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.

Art Unit: 2134

(2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.

(g) BRIEF SUMMARY OF THE INVENTION.

(h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).

(i) DETAILED DESCRIPTION OF THE INVENTION.

(j) CLAIM OR CLAIMS (commencing on a separate sheet).

(k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).

(l) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

Claim Objections

4.. Claim 2 is objected to because of the following informalities:

a. With respect to claim 2, there are three separate periods on lines 2, 4 and 8 (see MPEP, 608.01 (m), "Each claim begins with a capital letter and ends with a period. Periods may not be used elsewhere in the claims except for abbreviations. See *Fressola v. Manbeck*, 36 USPQ2d 1211 (D.D.C. 1995)").

Appropriate correction is required.

Drawings

5. The drawings are objected to under 37 CFR 1.83(a) because they fail to show the mode selection of switching the port from trusted port or untrusted port as described in the specification. The Figure simply shows each port either in trusted mode or in untrusted mode. Any structural detail that is essential for a

Art Unit: 2134

proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet” pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 2134

Claims 1 and 2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite in that it fails to point out what is included or excluded by the claim language. This claim is omnibus type claim.

With respect to claim 1, Applicant claims a button is used to select a trusted or untrusted port. However, the claim does not recite any structure or action as to how this button is used to make this selection.

With respect to claim 2, Applicant claim a switch for operating individual ports with a trusted and untrusted mode. Examiner notes that in the Specification, a button is used to make the selection to switch from one mode to the other. However, the claim does not recite how this switch is switching from the trusted mode to the untrusted mode. When interpreting the claim, the Examiner should not construe the claim to include limitation that is not recited in the claim. (see MPEP, 2111.01, "Though understanding the claim language may be aided by explanations contained in the written description, it is important not to import into a claim limitations that are not part of the claim. *Superguide Corp. v. DirecTV Enterprises, Inc.*, 358 F.3d 870, 875, 69 USPQ2d 1865, 1868 (Fed. Cir. 2004). See also *Liebel-Flarsheim Co. v. Medrad Inc.*, 358 F.3d 898, 906, 69 USPQ2d 1801, 1807 (Fed. Cir. 2004).

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Hunt et al. (U.S. Patent No. 7,305,549 B2, hereinafter Hunt).

With respect to claim 1, Hunt discloses a method of configuring a plurality of switch ports into trusted ports and untrusted ports (e.g. col. 16, lines 10-18), meets the claimed limitation of selecting a trusted or untrusted mode of port communications). “On Layer 2 Ethernet switching devices” is considered as an intended use. Therefore, it is not given patentable weight.

Art Unit: 2134

With respect to claim 2, Hunt discloses a method by which an Ethernet switch operates individual ports (e.g. col. 15, lines 37-50). The first mode of port operation, trusted mode, enables the device attached to the port to transmit data to or receive data from any other port on the switch (both trusted and untrusted ports) (e.g. col. 16, lines 16-18). The second mode of port operation, un-trusted mode, limits the device attached to the un-trusted port to transmit data to and receive data from trusted ports only, thereby prohibiting communication to and from all other device with attached to untrusted ports (e.g. col. 16, lines 10-16).

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

-Christensen et al. disclose a multi-port LAN switch for a token-ring network.

-Christensen et al. disclose a method and system of automatically configuring a LAN switch port of a multi-port LAN switch based on an attached device type.
